CS 575 Project 4

Jeremy Dao

May 2020

- 1. The following results were gathered using a machine with a Intel i7-7700k CPU (4 cores, 8 threads) running at 4.20GHz.
- 2. The following table displays the SIMD vs. Non-SIMD performance for varying array sizes. Note that all performance values are in units of MegaMultiplies per Second.

| Array Size | SIMD Performance | Non-SIMD Performance | Speedup |
|------------|------------------|----------------------|---------|
| 1024 | 219.27 | 87.99 | 2.49 |
| 2048 | 1226.34 | 486.00 | 2.52 |
| 4096 | 1239.72 | 487.04 | 2.55 |
| 8192 | 1245.17 | 486.69 | 2.56 |
| 16384 | 1248.78 | 487.13 | 2.56 |
| 24576 | 1249.80 | 487.32 | 2.56 |
| 35840 | 1247.87 | 486.99 | 2.56 |
| 49152 | 1247.29 | 486.95 | 2.56 |
| 65536 | 1249.71 | 486.85 | 2.57 |
| 102400 | 1247.50 | 486.75 | 2.56 |
| 204800 | 1274.50 | 497.94 | 2.56 |
| 307200 | 1246.31 | 486.91 | 2.56 |
| 409600 | 1274.54 | 497.98 | 2.56 |
| 512000 | 1272.63 | 497.67 | 2.56 |
| 614400 | 1269.93 | 496.94 | 2.56 |
| 716800 | 1264.40 | 496.27 | 2.55 |
| 819200 | 1246.77 | 494.06 | 2.52 |
| 1048576 | 1210.95 | 490.30 | 2.47 |
| 2097152 | 1172.60 | 480.22 | 2.44 |
| 4194304 | 1161.75 | 478.47 | 2.43 |
| 6291456 | 1164.13 | 480.08 | 2.42 |
| 8388608 | 1160.25 | 479.34 | 2.42 |

- 3. The following graph displays the speedup data from the table above.
- 4. We can see from the graph there is an initial peak in speedup before speedup plateaus back down again. The initial peak is caused by the low speedup value for small array size. In this case, the array size is too small to overcome the SIMD overhead of splitting the array and using the different registers, and thus speedup is lower. Speedup then peaks around 2.56 before dipping back down for very large array sizes. This could be caused by large array sizes affecting the prefetcher and possibly because it is not expecting an array so large, it does not prefetch far ahead enough.

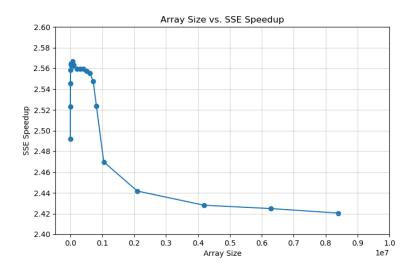

Figure 1: SIMD speed up vs. Array size

5. The following tables show the results for adding multi-threading to SIMD. The first table shows the SIMD performance for varying array sizes and number of threads:

| Array Size | 1 Thread | 2 Threads | 4 Threads |
|------------|----------|-----------|-----------|
| 1024 | 148.79 | 203.30 | 180.44 |
| 2048 | 972.00 | 416.01 | 1503.67 |
| 4096 | 1089.65 | 627.07 | 2203.33 |
| 8192 | 1160.01 | 777.45 | 2993.08 |
| 16384 | 1203.73 | 1061.07 | 3657.13 |
| 24576 | 1220.38 | 1303.15 | 4284.53 |
| 35840 | 1223.17 | 1560.36 | 3760.76 |
| 49152 | 1229.84 | 1807.26 | 4532.23 |
| 65536 | 1263.59 | 2036.23 | 4685.82 |
| 102400 | 1266.54 | 2440.54 | 4806.84 |
| 204800 | 1246.44 | 2478.10 | 4890.05 |
| 307200 | 1248.02 | 2481.78 | 4931.53 |
| 409600 | 1251.51 | 2480.08 | 4933.45 |
| 512000 | 1273.39 | 2481.74 | 4930.09 |
| 614400 | 1271.04 | 2477.83 | 4936.05 |
| 716800 | 1263.09 | 2456.33 | 4911.17 |
| 819200 | 1256.87 | 2449.40 | 4875.52 |
| 1048576 | 1206.65 | 2397.00 | 4754.61 |
| 2097152 | 1175.12 | 2275.36 | 4311.95 |
| 4194304 | 1168.05 | 2239.79 | 3962.02 |
| 6291456 | 1161.61 | 2217.90 | 3603.35 |
| 8388608 | 1160.42 | 2211.06 | 3538.31 |

The next table shows the Non-SIMD performance for varying array sizes and number of threads:

| Array Size | 1 Thread | 2 Threads | 4 Threads |
|------------|----------|-----------|-----------|
| 1024 | 73.49 | 128.90 | 131.64 |
| 2048 | 438.26 | 208.05 | 934.30 |
| 4096 | 460.64 | 308.88 | 1049.72 |
| 8192 | 472.27 | 339.40 | 1356.74 |
| 16384 | 479.05 | 441.24 | 1464.17 |
| 24576 | 481.82 | 533.44 | 1824.64 |
| 35840 | 482.53 | 626.45 | 1420.03 |
| 49152 | 483.66 | 716.64 | 1871.39 |
| 65536 | 495.39 | 806.89 | 1898.82 |
| 102400 | 495.88 | 965.18 | 1915.67 |
| 204800 | 485.69 | 968.36 | 1929.11 |
| 307200 | 486.00 | 969.78 | 1935.24 |
| 409600 | 497.09 | 970.40 | 1936.08 |
| 512000 | 497.20 | 970.95 | 1936.18 |
| 614400 | 497.13 | 970.35 | 1938.37 |
| 716800 | 496.15 | 968.56 | 1935.17 |
| 819200 | 495.10 | 967.77 | 1933.21 |
| 1048576 | 489.40 | 959.94 | 1919.60 |
| 2097152 | 480.39 | 943.79 | 1889.95 |
| 4194304 | 479.81 | 942.35 | 1883.49 |
| 6291456 | 479.84 | 940.33 | 1872.96 |
| 8388608 | 479.98 | 937.64 | 1869.25 |

The last table shows the speedup gained going from Non-SIMD to SIMD for varying array sizes and threads. Note that data for 1 thread is not shown since that is the baseline, and thus is 1 for all array sizes.

| Array Size | 2 Threads | 4 Threads |
|------------|-----------|-----------|
| 1024 | 2.77 | 2.46 |
| 2048 | 0.95 | 3.43 |
| 4096 | 1.36 | 4.78 |
| 8192 | 1.65 | 6.34 |
| 16384 | 2.21 | 7.63 |
| 24576 | 2.70 | 8.89 |
| 35840 | 3.23 | 7.79 |
| 49152 | 3.74 | 9.37 |
| 65536 | 4.11 | 9.46 |
| 102400 | 4.92 | 9.69 |
| 204800 | 5.10 | 10.07 |
| 307200 | 5.11 | 10.15 |
| 409600 | 4.99 | 9.92 |
| 512000 | 4.99 | 9.92 |
| 614400 | 4.98 | 9.93 |
| 716800 | 4.95 | 9.90 |
| 819200 | 4.95 | 9.85 |
| 1048576 | 4.90 | 9.72 |
| 2097152 | 4.74 | 8.98 |
| 4194304 | 4.67 | 8.26 |
| 6291456 | 4.62 | 7.51 |
| 8388608 | 4.61 | 7.37 |

6. The following graph displays all the speedup data from the above tables into a single graph, showing the speed up gained when using a vary number of threads with and without SIMD:

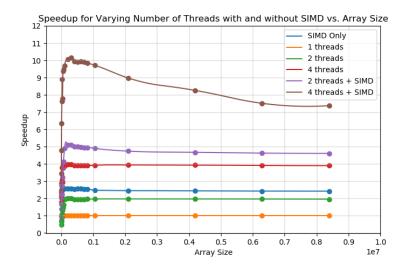

Figure 2: Speedup vs. Array size for varying number of threads with and without SIMD We can see that for 2 and 4 threads alone, we get the expected 2x 4x speedup, along with the usual low speedup behavior for small array sizes due to the overhead of parallelization outweighing the speedup benefit when there is such little data. It is clear than adding SIMD along with multiple threads drastically improves performance, achieving much higher speedups can just multithreading along. Furthermore, for the multithread + SIMD cases we can see the downward curve, similar to what we saw in the single thread SIMD graph above, that could be caused by non-optimal prefetching. This is seems to have a larger affect on the 4 threads case than the 2 threads case since there are more threads to prefetch for, exacerbating the issue.
